

PLASTITE® 48-2 Screws

PLASTITE® 48-2 TRILOBULAR™ thread-rolling screws have twin lead threads to provide faster, more efficient insertion. The sharp 48° thread profile increases holding strength and reduces material displacement and boss bursting tendencies. Drive and strip torques are higher, making drive tool adjustments simple. NOTE: Component and boss design should allow for much faster engagement than with single lead screws.

MATERIAL: Low Carbon Steel, Suitably Hardened and Tempered

FINISH: As Requested

LENGTH TOLERANCES:

Nom.

Length Tol.
Thru 3/4" ±.030"
Over 3/4" ±.050"
Over 1/4" Dia.

All Lengths ±.050"

^{*} Non-standard size

- Size/TPI The PLASTITE® 48-2 screw size designation combines the commonly used numerical screw size with the major diameter (Max. "D"), as measured with ordinary micrometers, followed by the number of threads per inch.
- Recommended pilot hole sizes are subject to variation dependent on depth of engagement, ease of driving required and material being tapped. Users of PLASTITE® 48-2 screws should perform their own test to determine the most efficient pilot hole size for their own

particular use, or contact the application engineering department of a qualified supplier or REMINC.
